Instructions for Use

1. Please use a charger with an output of 5V-2A or lower to charge the device. The device can also be charged using a USB cable connected to a computer. The estimated charging time is between 4 and 8 hours, depending on the power source and charging method.

Warning: Avoid using fast chargers, as they are not supported.

2. This device supports both single and dual player. In the single player scenario, ensure it is inserted first, and access the game menu to configure the handle.

3. The console functions as an extension for the device and can control the same character or actions as the main unit when directly connected.

4. To control different characters in a dual-player game, insert the console and access the game menu. Navigate to "Option Settings," then "Key Configuration," and select "Handle One." Press the "X" key and wait for the number "2" to appear next to "Handle 1." This setup completes the configuration process.

5. For two-player with a second game pad, simply connect the additional console. No additional setup is required. The gamepad is ready to use.

Language Settings

The default language of the machine is English. If the English menu appears when you start the device, navigate to "Setting," select "Language," choose your preferred language, and press the "B" button to confirm.

Saving or Loading the Game

To save your game progress, press and hold the "SELECT" and "START" buttons simultaneously during gameplay or when you wish to quit.

A prompt will appear on the screen.

Select "Save Progress" from the menu and press the "B" button to confirm. You can save up to six game progress files.

To continue from a saved game, select "Load Progress" after entering the game.

Note: Do not delete the existing folders on the device, as this may cause the system to malfunction. Since the machine supports multiple game console formats, key functions may vary between games. It is recommended to test each key for functionality, as operations may differ based on the specific game.

Install or Delete a Game

1. To delete a game, connect the device to a computer. Open the "GAME" folder to view the removable games. Games that are pre-installed on the device will not appear in this folder and cannot be deleted.

2. To download a game, search for the game online and download it to your computer. Use a USB cable to connect the game console to the computer. Copy the downloaded game file to the "GAME" folder on the device. Supported file formats include ".gba, .gbc, .gb, .sfc, .nes", and others. Since compatibility may vary depending on the website or file source, unsupported games might not work. If an issue occurs, try downloading the game from a different source.

Note: For smoother performance, unplug the data cable after transferring the game. A large number of games can slow down the interface. Use the save feature to shut down the game properly. Upon restarting, the game will not reload automatically.
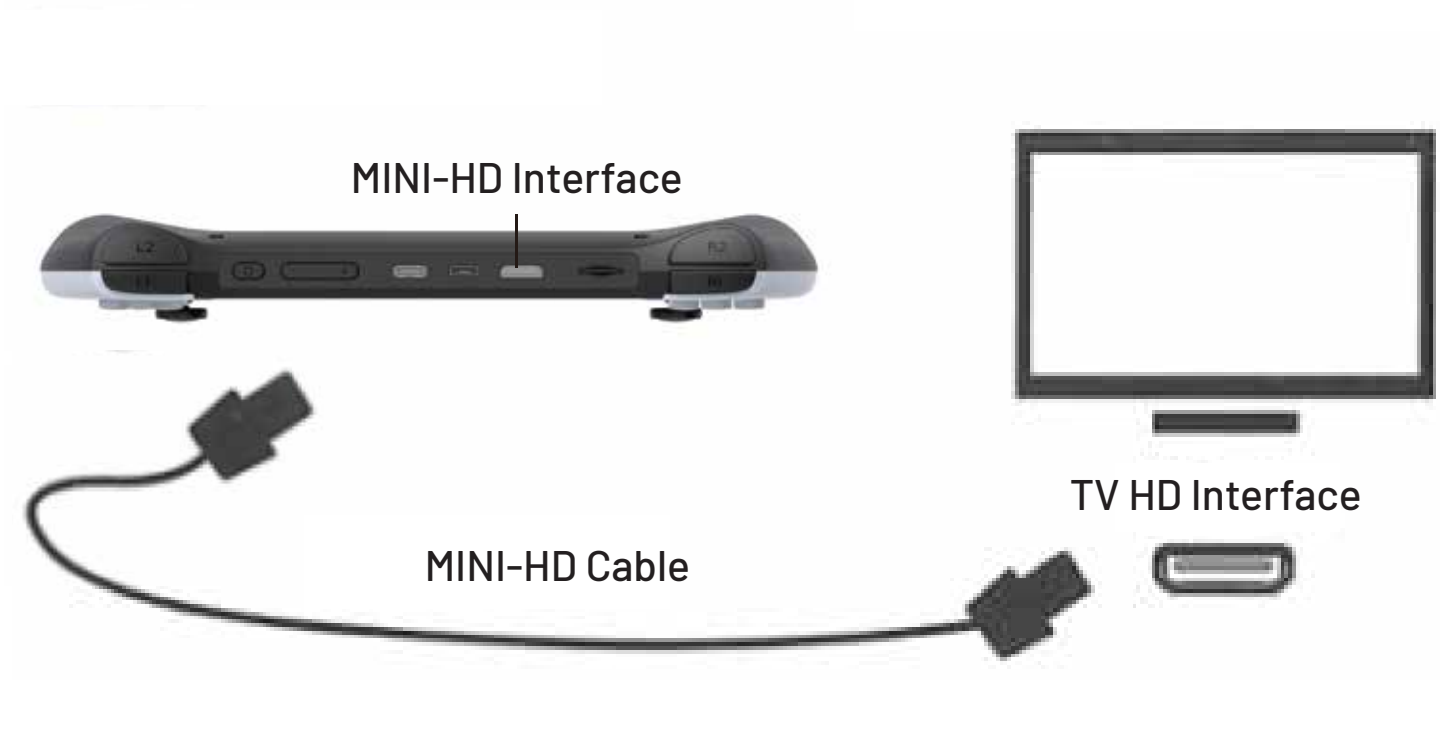

3. As an alternative, you can copy downloaded games directly to the corresponding format folder on a memory card. Insert the memory card into the device, which will automatically read its contents. Locate the game in the correct folder and open it immediately.
